A COMPLETE HYGIENE SOLUTION

**99.99% EFFECTIVE
AGAINST CORONAVIRUS**

A proactive approach must consist of **three essential components** for protection against virus transmission in shared environments.

Washing Your Hands

Sanitising Surfaces

Cleaning The Air

We Need to Clean the Air

ASHRAE, the world's largest association dedicated to the subject of ventilation and air quality (HVAC), published a statement regarding transmission of SARS-CoV-2 and the operation of HVAC systems during the COVID-19 pandemic which opened with:

"Transmission of SARS-CoV-2 through the air is sufficiently likely that airborne exposure to the virus should be controlled."

It Doesn't Stop at Viruses

The average person inhales 10,800 litres of indoor air every day, with most people spending 90% of their time indoors and nine hours per day in shared environments – spaces that are up to five times more polluted than outdoors.

HVAC systems are simply not enough. They should be complemented with air purifiers to be effective.

Indoor air is
up to

DIRTIER*
than outdoor air

Viruses / Bacteria

Allergens

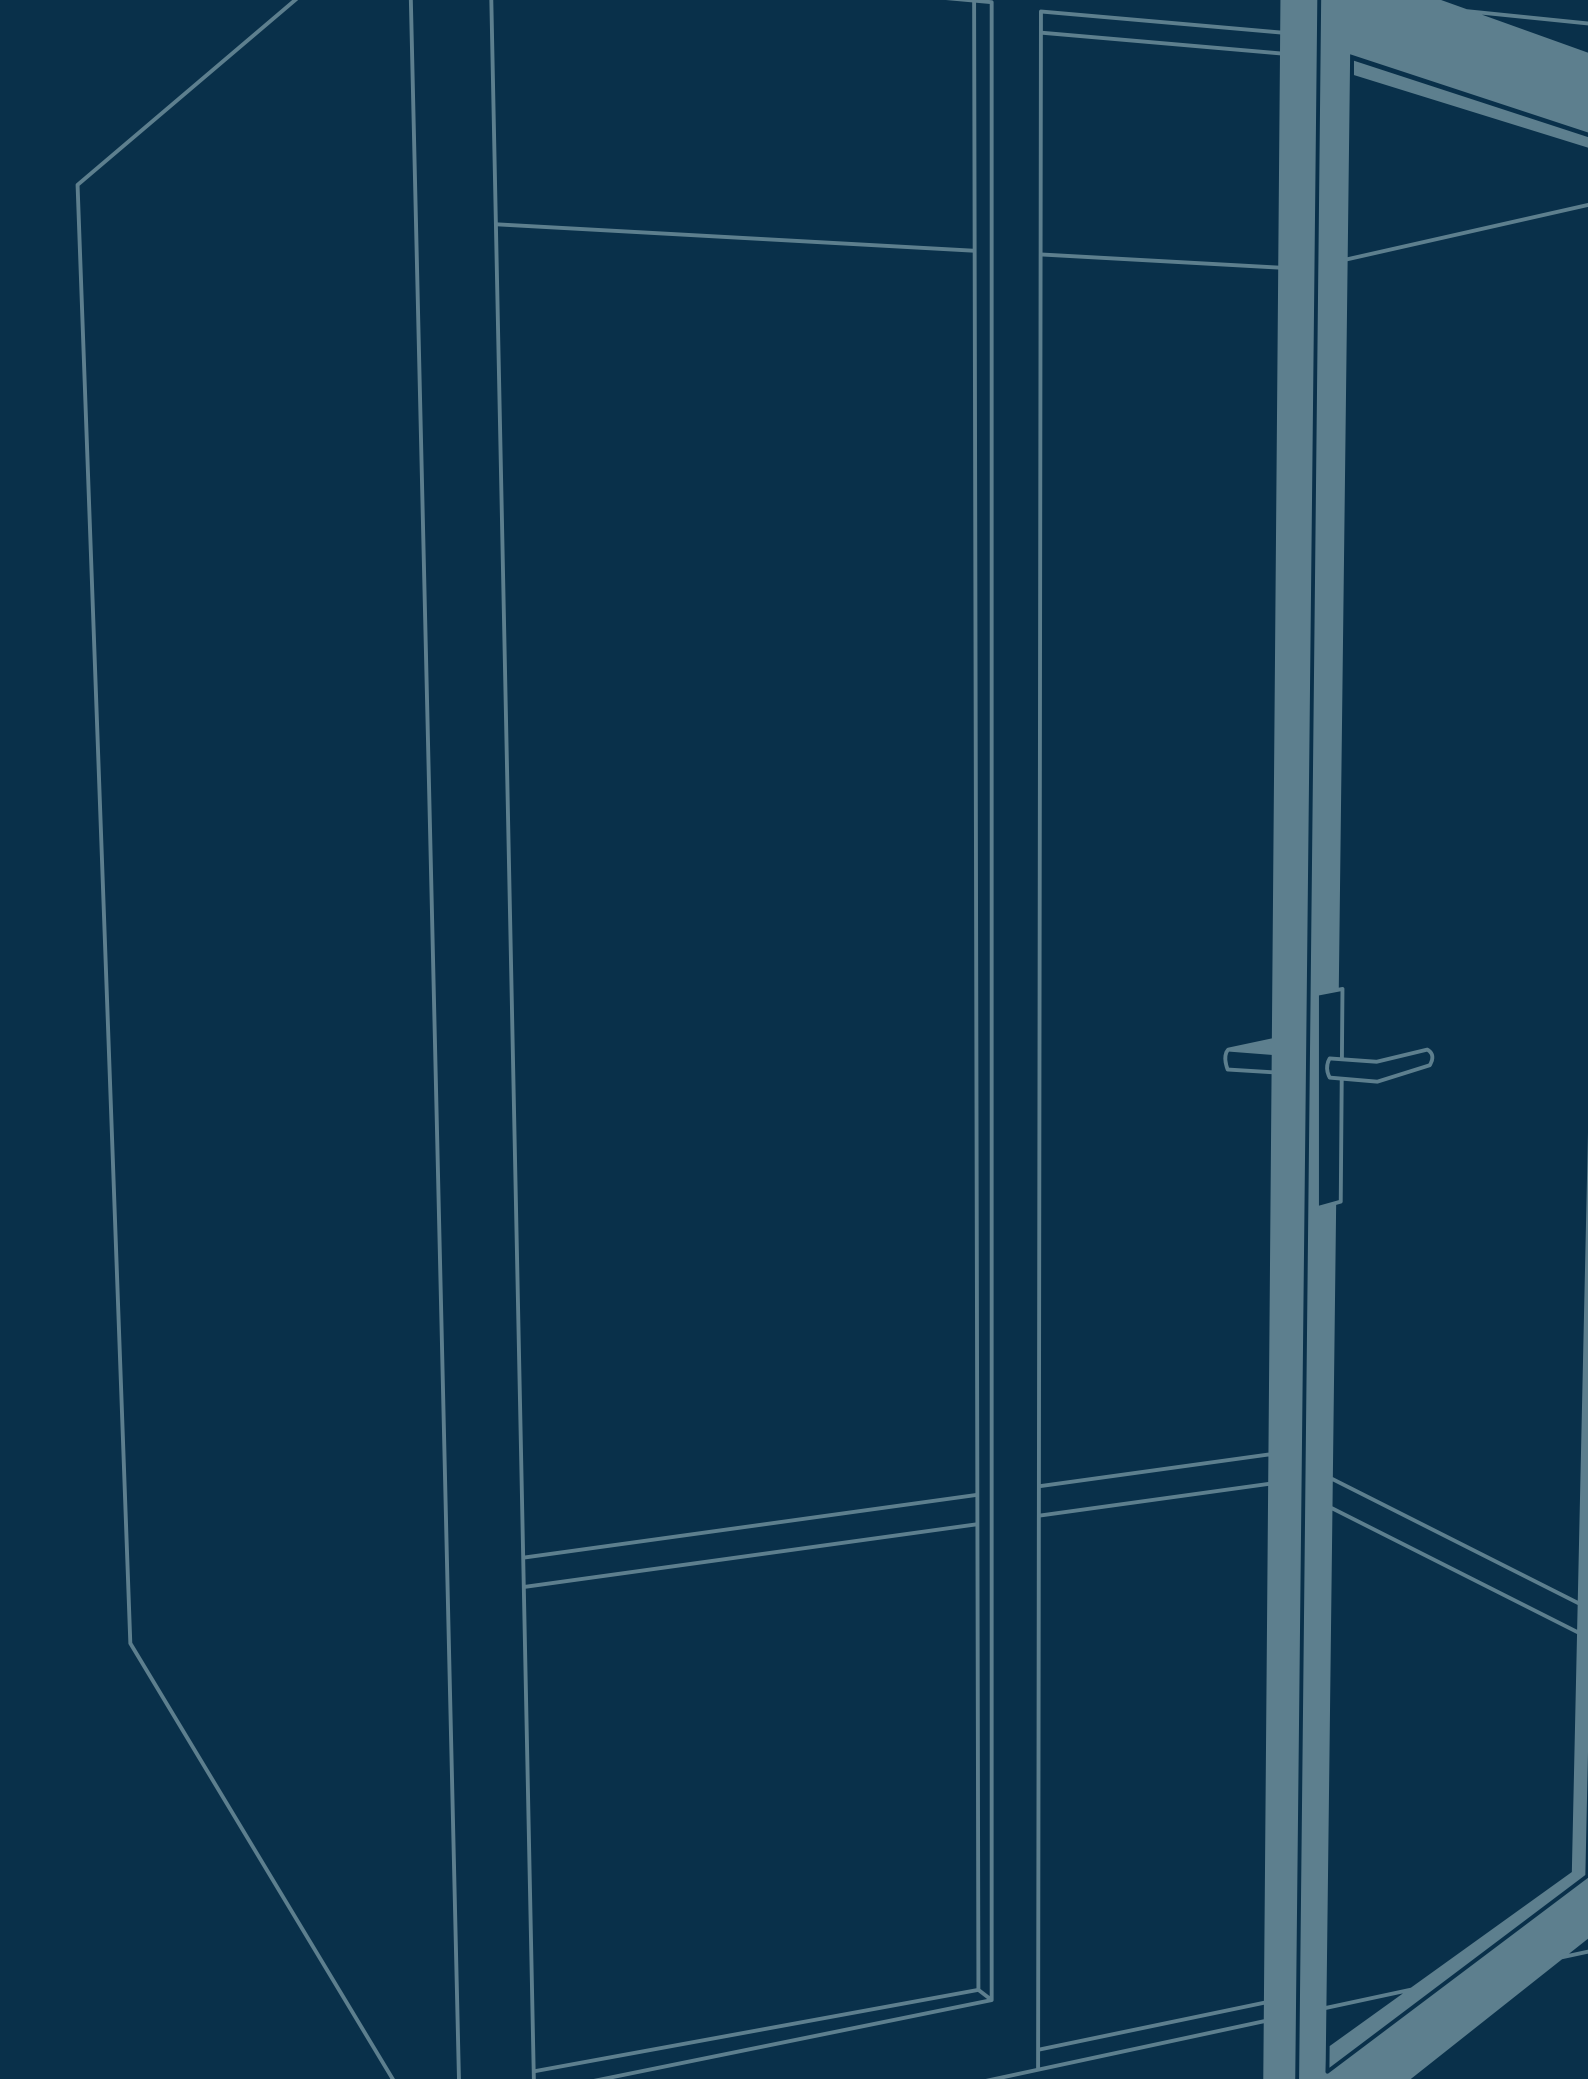

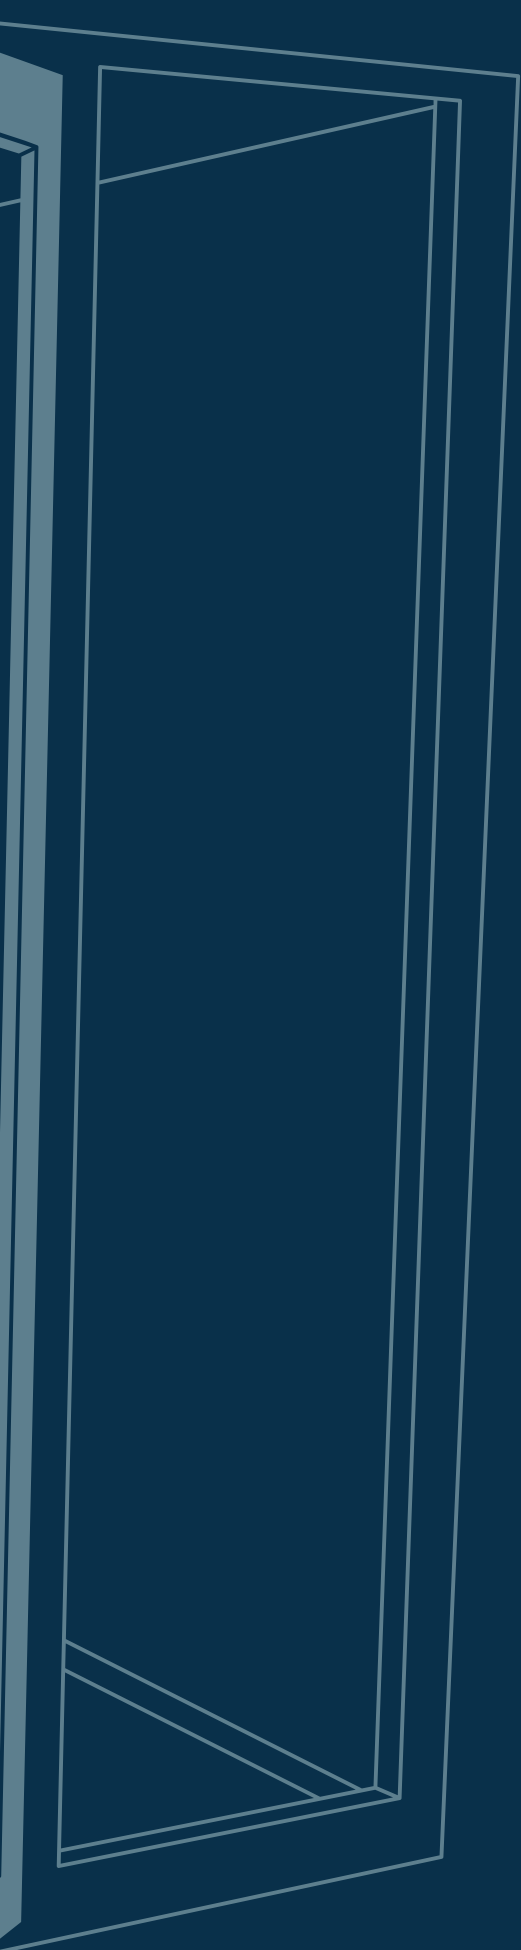

VOCs

Odours

Fellowes AeraMax PRO Air Purifiers were demonstrated to be effective in reducing aerosolised airborne concentration of Human Coronavirus 229E in a test chamber reaching 99.99% airborne reduction within 1 hour of operation*. * Based on Independent Laboratory Testing

Meeting Pod
Telephone Booth
Canteen
Training & School Desks

Booths

Phone Booth

Powder coated aluminium frames with counter-top.

546956 External dimensions 2400H x 1200W x 1200D

A perfect place to take those private calls or online meetings.

The Phone Booth has been design to fit into any existing internal space, all that is required is a plug point to ensure that the occupancy sensor and LED light panels, come on and stay lit whilst occupied.

External Facing

16mm Woodgrain melamine or plain colours.

Internal Facings

9mm PET acoustic fibre panels, with internal acoustic infill to limit any unwanted noises.

The booth has its own acoustic ceiling and ceiling light driven by motion sensors. The unit also has its own base floor with internal carpets to ensure that sound ingress is limited.

The units are stand alone, but can be grouped together to form hubs in public spaces like, airports, conferences, shopping centres etc.

The internal top can be set at seated or bar height for seated or standing purposes.

Meeting Pod

Powder coated aluminium frames. Unfurnished.

546957 External dimensions: 2400H x 2200W x 2100D

A mobile meeting POD suitable for 2-4 people. The unit has its own built in fan to ensure that airflow remains within the SABS codes for air circulation and intake volumes.

The unit incorporates its own occupancy and motion sensor ensuring that you will never be left in the dark without fresh air input. However, when not occupied, energy is saved and light and fans turn themselves off.

External Facing

16mm Woodgrain melamine or plain colours.

Internal Facings

9mm PET acoustic fibre panels, including internal wall cavities packed with acoustic wool to limit transgressional sound.

Double glazing ensures that all weak acoustic points are addressed.

At 2400mm high the units can be placed into most floor spaces and they have their own ceilings and floors to ensure a sealed envelope is created.

The booths have a centrally located feature wall for placements of TVs, whiteboards or anything that you want your users to focus on.

Internal finishes can be customised.
